

Driving a car can be so relaxing ...

... when the acoustics are right. Using state-of-the-art silencing and insulating elements, we ensure a low noise level and a pleasant overall sound environment. We can make a major improvement to the acoustics of existing and future car models by conducting a precise analysis of the sound characteristics of all individual components. This is confirmed by trials conducted on test facilities and on the road and, not least, by articles in motoring journals.

DEVELOPER AND SUPPLIER FOR AUTOMOTIVE ACOUSTIC SYSTEMS AND TRIM PARTS
